

Function

Designed for casting into spray aprons in public playgrounds to ensure vandal resistant installation, or used in small and medium sized pools. Gentle spray coverage. The angled crown jet NLF076 can be used as a decorative spray feature for swimming pools and can aid in the cooling of the pool water in a hot climate. **Not water level dependent.**

Specification

Construction shall be machined cast bronze and/or brass. Face plate shall be removable for easy cleaning by using a security key. A winter cover shall be available for proper winterization of the water system.

Options

- WMF082 - Security key (face plate removal)
- WMF081 - Winter cover
- ASU100 - 15° swivel connection for directional alignment of nozzle

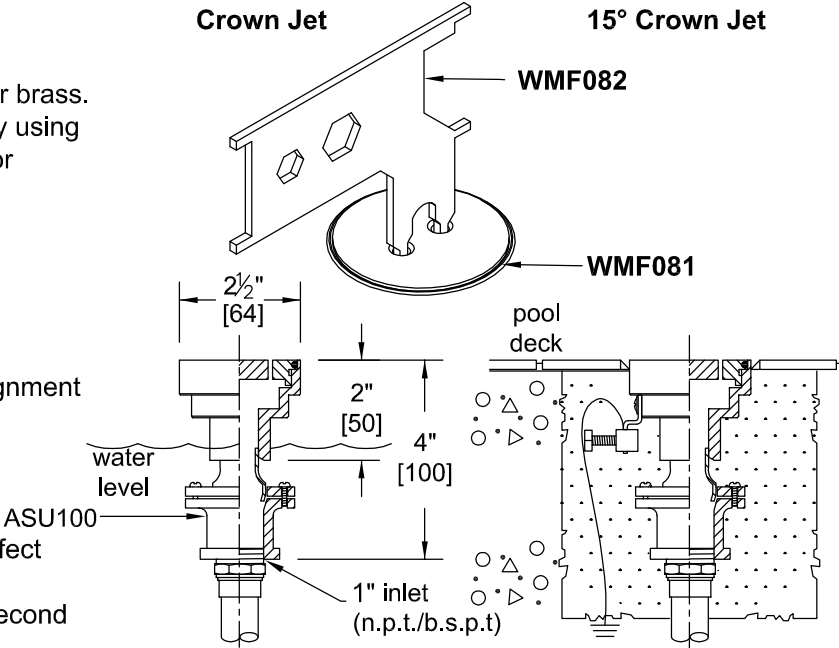

Notes

- 1. Requires fine screening at pump for optimum effect (suction strainer openings 0.040")
- 2. For interactive play do not exceed 20 feet per second = 7.6 US gpm
- 3. Contact Crystal Fountains for customized hole patterns
